

SCADA Systems Development Manager

Position Summary

We are seeking a high-bandwidth individual to manage our SCADA/IT department, and take on software development projects on a number of platforms. You will be joining a fast-paced team in supporting our SCADA as a service product offering and our IT infrastructure company-wide. This position is multifaceted, and can include network admin, server admin, SCADA admin & development, phone-based customer service, and software development.

This position is in Midland, TX with some travel possible. Position does include on-call time.

Responsibilities

- Monitor SCADA communications & work with our technicians and customers to troubleshoot comms or production issues
- Work with our Engineers & technicians to bring new facilities online and build accompanying objects, screens, reports, alarms, etc.
- Manage team of SCADA/IT personnel
- Software development for both internal & external projects using the .NET stack, ClearSCADA, & other technologies
- Oversee maintenance & growth of internal network & server infrastructure.

Desired Experience

Experience in the following area is highly preferred:

- .NET software development (SSIS, SQL Server, C#, javascript, & VBscript)

Experience in or knowledge of the following areas is a plus, but not required:

- SCADA system design, configuration, or maintenance – ClearSCADA especially.
- IT – Windows admin, network admin, computer repair, etc.
- Technical support or customer service
- Oil & Gas field experience
- RTU configuration
